

# How to create a PostgreSQL Database through the Database Wizard?

1. To create a PostgreSQL database through the Database Wizard, go to the Control Panel and click the "PostgreSQL Database Wizard" option.
  2. Then fill in the "New Database" field with the name of the database. After clicking the "Next Step" button.
  3. On the next screen, complete the following fields:  
User Name: User name for database access.  
Password: Access Password.  
Password (Repeat): Repeat the access password.
- Then click the "Create User" button.
4. After clicking the "Add" button.
