

How to configure store images to be sent by FTP to a CDN or Web Host?

The first step you need to hire a provider or CDN to host your images, transmitting from our platform is done by FTP. Requirements: You must have a domain with SSL and access to port 80. After obtaining the FTP data from your provider follow the instructions below:

01) Access the Control Panel

02) After login click Settings >> Images

03) Edit the fields: CDN Image Ftp Host, CDN Image Ftp Login, CDN Image Ftp Password, CDN Image Ftp Folder and CDN Image URL

If you want to migrate your site to CDN, the first step is to make the hiring as described above, then request the compression of the images folder, after you can download and send via FTP or SSH to the provider, be sure to configure the data as above.
