

# Como obter a lista de formas de entrega via API ?

URL: [http://www.nomedoseusite.com.br/api\\_ds\\_orders.php?action=calculate\\_shipping&country={country id}&post\\_code={post code}](http://www.nomedoseusite.com.br/api_ds_orders.php?action=calculate_shipping&country={country id}&post_code={post code})

| Header Parameter | Format          |  |
|------------------|-----------------|--|
| Token            | base64_encode() |  |
| Secret           | base64_encode() |  |
| E-mail           | base64_encode() |  |

  

| Parameter         | Format | Description   |
|-------------------|--------|---|
| country           | GET    | Country number<br>Only number is required                                   |
| post_code         | GET    | Delivery Post Code is required  |
| products_id       | JSON   | Use the API to list the order data to get the product_id<br>Format: int(11) |
| products_quantity | JSON   | Quantity number<br>Only number is required                                  |

## PHP Sample:

```
// sample calculate_shipping

$url = $domain_url . '/api_ds_orders.php?action=calculate_shipping&country='.$_GET['country'].'&post_code='.$_GET['post_code'];

$data_products[0] = array("products_id" => $_GET['products_id'], /
// Example: 130 (Only number is required) * FIELD REQUIRED
                        "products_quantity" => $_GET['products_q
quantity'] // Example: 1 (Only number is required) * FIELD REQUIRED
                        );

$data_products[1] = array("products_id" => $_GET['products_id1'],
// Example: 130 (Only number is required) * FIELD REQUIRED
                        "products_quantity" => $_GET['products_q
quantity1'] // Example: 1 (Only number is required) * FIELD REQUIRED
                        );

$data = array("products" => $data_products // * FIELD REQUIRED
);

$data_string = json_encode($data);
```
