Files

How to Use the Backup Wizard

This backup tool provides the functionality of downloading a compressed file containing your complete website or specific parts of it to your computer.

In addition, the functionality of allowing the restoration of the same data whose downloads have been made to the space originally destined for your domain inside the server is included.

Included in the backup zip file are:

   * Home Directory
   * MySQL Databases
   * Configuration of mail senders
   * Mail filter configuration
