## **Database**

## How to access MySQL remotely?

- 1. To access MySQL remotely, you must first enable this option in the Control Panel cPanel. Access the Control Panel cPanel as follows: Http://www.yourdomain.com/cpanel
- 2. After accessing the Control Panel, in the "Databases" tab click "MySQL Remote".
- 3. On the next screen, you must fill in the "Host" field with the IP of your connection. If you want to enable for all IP's, simply enter the percent sign (%).

Then click the "Add Host" button.
